

Landscape Irrigation

Zone	Head Count
1	5
2	10
3	12
4	11
5	10
6	8
7	10

Run Times

Months	City Restrictions	My Approach
Nov thru Mar	Mondays only	15m/zone if no rain recently
Apr thru May	Mon/Fri only	15m/zone if no heavy rain recently
Jun thru Aug	Mon/Fri only	22m/zone
Sep thru Oct	Mon/Fri only	15m/zone if no heavy rain recently

I tend to prefer multiple run times on a watering day in order to minimize any runoff. The hard clay soil sometimes makes watering pointless when too moist. The run times in the table above are cumulative. So 15m/zone may be accomplished with three run times, 5m/zone, roughly 60-90min apart.

Varies by season, weather conditions, and any adjustments to the local situation. These figures are for the turf grass and may need to be adjusted for beds or shrubs. However, only zone 1 is really setup to be a “bed-only” or “shrub-only” zone. All other zones are installed for the benefit of turf grass.

These figures are also for spray heads. Should a different head (rotary, gear, etc) be used, the figures should be adjusted for the flow rate of the new head.

Foundation Irrigation

These are season values as well, as supplied by the installer. He provided a baseline figure of 42min, then month ratios of the baseline.

Month	Run Time (min)	Ratio
Jan	2	5%
Feb	2	5%
Mar	13	30%
Apr	25	60%
May	34	80%
Jun	42	100%
Jul	42	100%
Aug	46	110%
Sep	42	100%
Oct	25	60%
Nov	8	20%
Dec	2	5%
